(Please note that the “days to maturity” are from transplanting and assume a warmer climate than the Puget Sound area. Expect to add about another ¼ to 1/3 as many days before harvest.)

**BETTER BOY** (HYB) Produces large crops of bright red (12-16 oz.) flavorful fruit. Similar to Big Boy. Firm & perfect for slicing. One of the best tasting, best producing garden tomatoes available anywhere. Indeterminate. 75 days

**BIG BEEF** (HYB) Bred for home gardeners, this variety has good yields of extra-large (10-12 oz.), crack-resistant tomatoes with old-time flavor. It’s quite early for a tomato of this size. Indeterminate. 73 days.

**BRANDYWINE** (OP) Amish heirloom with large, rich flavored fruit. This long-season tomato may ripen few, if any, fruit in a lousy summer. It is not a heavy bearer and the fruit is often lumpy and distorted, but many gardeners grow it anyway. Indeterminate.

**CELEBRITY** (HYB) Nice-sized (7-8 oz.) fruit on vigorous vines. Average fruit production and taste with good crack-resistance. Determinate. 70 days

**EARLY GIRL** (HYB) The Puget Sound area’s favorite early slicing variety. Dependable, large harvests of flavorful, solid 4-5 oz. fruit. Good taste; slightly tough skins. Indeterminate. 52-55 days. Ready in 8-10 weeks in WSU Skagit Veggie Trials.

**FANTASTIC** (HYB) Popular, productive, very flavorful tomatoes of nice size (3-5”). Ripen mid to late August at WSU Master Gardener’s Garden in Bellevue. Indeterminate.

**FAVORITA** This large (0.8 oz.), cherry-type tomato is a favorite at the WSU Skagit Veggie Trials. It’s productive with excellent flavor. Indeterminate. Ready in 9-13 weeks in WSU Skagit Trials.

**GLACIER** Very early variety will ripen in the worst Northwest summer. Plentiful, but small fruit is tasty. Determinate.

**JULIET** (HYB) 1999 ALL-AMERICAN SELECTIONS WINNER. Elongated plum tomatoes grow in grape-like clusters on vigorous vines. The 1 oz. fruit has red, glossy skin & wonderful sweet flavor. Fruit is crack-resistant & holds on the vine well. Expect high yields from plants that are tolerant to late blight. Excellent for salsa. Indeterminate. 60-70 days. Ready in 13 weeks in WSU Skagit Veggie Trials.
LEGEND (OP) This early maturing cultivar, bred at OSU, is billed as the first big-fruited (4-5") tomato with resistance to late blight. Local experience has shown it to have moderate production of an average-sized tomato (2½"). The taste is not outstanding and it does get late blight; it’s only resistant, not immune. Determinate.

OREGON SPRING (OP) A cold-tolerant tomato developed by OSU for short-season gardeners. Compact plants produce concentrated sets of medium-sized (3-4"), oval, nearly seedless fruit. Juicy & tender with full tomato flavor. Determinate. 52-60 days. First tomatoes as early as July 15th at WSU Master Gardener Garden in Bellevue.

PATIO (HYB) Very popular for growing on patios, decks, courtyards, or wherever garden space is limited. Plants have attractive, deep green foliage & only become about 2 feet tall, but produce large harvests of bright red, 3-4 oz. flavorful tomatoes. Outstanding for growing in containers. Determinate. 67-70 days.

SANTA (HYB) Clusters of 20 or more oblong, baby plum fruit look like red grapes. Fruits average ¾ to 1 ounce and are firm and meaty with few seeds. Late blight resistant. Indeterminate. 65 days.

SANTIAM (OP) An OSU release, similar to Oregon Spring, but a bit earlier and with slightly smaller (2-3") round fruits. Determinate 48-55 days. Ready in 9 weeks in WSU Skagit Veggie Trials.

STUPICE (OP) Old Czechoslovakian potato-variety with like foliage produces small (2") , round fruits. Flavor is good, but its claim to fame is earliness. Stupice was the earliest ripening of the 30 tomatoes grown at the WSU Skagit Valley Veggie Trials in 2002. Indeterminate. Ready in 7 weeks in Skagit Trials.

SUN GOLD (HYB) Bright orange cherry (0.6 oz.) tomatoes are borne in large, grape-like trusses. Consistently ranks first in tomato taste tests at the WSU/King County Master Gardener Demonstration Garden. Very productive. Fruit cracking sometimes a problem. Indeterminate. Ready in 10 weeks in WSU Skagit Veggie Trials.

SUPERSWEET 100 (HYB) This one supersedes Sweet 100 for its extra sweetness. Same great flavor & amazingly high yields of the sweetest 1-2 inch fruits with higher Vitamin C content than most other tomatoes. Indeterminate. 65-70 days.

SWEET MILLION (HYB) Improved version of Sweet 100, this variety offers the same wonderful flavor & yields, but with less cracking. Incredibly long clusters of 1-inch dark red fruit on tall, vigorous plants. Indeterminate. 65 days.

VIVA ITALIA (HYB) An Italian pear-shaped, past-type tomato with a high sugar content. Ripens mid-August to mid-September at the WSU Master Gardener Demo Garden in Bellevue. Tasty for fresh eating or canning. Determinate. 72-80 days.

YELLOW PEAR (OP) These clear yellow, pear-shaped tomatoes are 1 ¾-2 inches long. Considered “garden candy” by many. Pretty in baskets. Tall plants bear large & continuous harvests. Indeterminate.
